Summary

Full Stack Engineer with 2 years of experience in **Node.js, React.js, and MongoDB**, specializing in scalable marketplace platforms, **REST API design, MongoDB aggregation optimization, ONDC integrations**, and **AI-powered application development**. Delivered 30–45% reductions in query latency and report generation time across high-load commerce systems; skilled in **backend architecture, system debugging, database performance tuning**, and full-stack feature delivery.

Skills

Languages: JavaScript, C++

Backend: Node.js, Express.js, REST API Design, Asynchronous Programming, Git, GitHub

Databases: MongoDB (Aggregation Pipelines, Indexing), SQL

AI & Integrations: Google Gemini API, RAG (Retrieval-Augmented Generation), ONDC

Others: Data Structures & Algorithms, System Design (LLD), Mocha, Chai, CLI Tools, Debugging, AWS (EC2, S3), Docker, CI/CD.

Work Experience

StoreHippo Pvt. Ltd.

Nov 2024 – May 2026

Junior Software Developer

- Developed and maintained scalable full-stack features and **RESTful APIs** for a **multi-vendor marketplace platform** using Node.js, React.js, and MongoDB, enabling modular integrations and contributing to platform stability.
- Optimized **MongoDB aggregation pipelines** and indexing strategies for analytics and reporting, reducing report generation time by **35–45%** and backend latency by **30%+** under high-load production conditions.
- Designed and shipped **10+ business intelligence reports** and optimized React analytics dashboards for near real-time merchant insights, improving UI load times by up to **30%**.
- Worked on **ONDC (Open Network for Digital Commerce) integration**, handling API communication, asynchronous callbacks, data synchronization, and transaction reliability across distributed services.
- Diagnosed and resolved production incidents across frontend and backend systems using structured debugging approaches — logs, CLI tools, and root-cause analysis — reducing average resolution time by **40%**.

WebDesys Techno Consultant Pvt. Ltd.

Dec 2023 – May 2024

Full Stack Developer Intern

- Developed full-stack web applications using **Node.js and React.js**, improving overall system performance by **20%**.
- Built reusable UI component library and optimized frontend rendering, reducing page load time by **25%**.
- Identified and resolved **30+ bugs**, improving application stability and user experience.

Projects

AI Dev Knowledge Assistant

Node.js, Express, React, MongoDB, Google Gemini API | May 2026

- Built a **MERN AI assistant** powered by **Google Gemini API (gemini-1.5-flash)** that answers developer queries from a personal knowledge base of docs and error logs.
- Implemented a **RAG pipeline** with keyword-based document scoring to retrieve top-ranked context before every AI call — zero-cost, no vector DB.
- Designed a **linked-list memory architecture** (`nextMessageId` chaining) with **AI-driven summarization** for efficient history traversal and **context compression**.
- Built an **in-memory cache** (query + message hash key) and **custom request queue** to eliminate redundant Gemini API calls and prevent parallel-request overload.
- Engineered a **debugging mode** triggered by error-intent queries — prioritizes error docs in RAG and returns structured `{ issue, fix, explanation }` responses.

Education

IIMT College of Engineering

B.Tech in Computer Science and Engineering

2020 – 2024

CGPA: 8.68/10
